use]

PROJECT

REELRECS - RAG CHATBOT

A conversational movie recommendation chatbot powered by semantic search. Users ask natural language questions and receive personalized recommendations grounded in real data using Retrieval-Augmented Generation. Built as a secure fullstack app with server-side API calls and deployed as a single service on Render. *[Express] [Gemini API] [PostgreSQL (pgvector)] [Neon]*

ASSEMBLY ENDGAME - WORDGAME

A Hangman-style word guessing game where incorrect letters eliminate programming languages one by one. All game state is derived from two pieces of state rather than stored redundantly. Implements screen reader support with aria-live regions and conditional styling with clsx. *[React] [TypeScript] [Accessibility] [Vitest]*

PAPER LIKE A BOSS - SALES DASHBOARD

A real-time sales dashboard where reps log deals and admins see team performance on a live bar chart. Uses Supabase real-time subscriptions to update the chart automatically on every new deal. Implements role-based access control, database triggers for user sync, and Row Level Security policies. *[React] [Supabase real-time] [RBAC]*

SPIRAL SOUNDS - WEBSHOP

A full-stack vinyl record store with browsing, genre filtering, search, and shopping cart functionality. Built with session-based authentication using httpOnly cookies and a route-controller-middleware separation pattern. Frontend uses vanilla JavaScript ES modules with no bundler or framework. *[Node.js] [Express] [SQLite] [session auth]*
